-!- FUNCTION: THIS PROTEIN BELONGS TO THE HISTONE LIKE FAMILY OF PROKARYOTIC DNA-BINDING PROTEINS WHICH ARE CAPABLE OF WRAPPING DNA TO STABILIZE IT, AND PREVENT ITS DENATURATION UNDER EXTREME ENVIRONMENTAL CONDITIONS (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO THE BACTERIAL HISTONE-LIKE PROTEIN FAMILY.

```

Pred. No. is the number of results predicted by chance to have score greater than or equal to the score of the result being part and is derived by analysis of the total score distribution.

CC AAY92571 to AAY82577 represent specifically claimed copolymer molecular CC weight TV-marker polypeptides from the present invention. The present CC invention describes polypeptides (I) for determining the molecular cCC weight of a copolymer (CP), which has an identified molecular weight CC and an amino acid composition corresponding to the copolymer. The CC polypeptides of the invention are used as molecular weight markers for CC glatiramer acetate related terrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune CC diseases which may be treated include either cell-mediated or antibody-mediated diseases such diseases include arthritic conditions, cC demyelinating diseases such diseases include arthritic, autoimmune CC sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic canaemia, autoimmune cophoritis, autoimmune thyroiditis, autoimmune CC uveoretinitis, Crohn's disease, chronic immune thrombocytopaenia CC disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic GC disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic GC disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic GC include host-versus-graft disease, graft-versus-host disease, and CC include molecular weights and physical properties which are analogous to glatiramer acetate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

                                                                                                                                                                                                                                                                                                                       contributed by the present invention. The present convention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight cand an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for complete acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune could diseases which may be treated include either cell mediated or cantibody-mediated diseases. Such diseases in clude arthritic conditions, completinating diseases and inflammatory conditions, autoimmune cophoritis, autoimmune thyroiditis, autoimmune cophoritis, autoimmune thyroiditis, autoimmune cophoritis, contact sensitivity disease, diabetes mellitus, Graves disease, chillian-barre's syndrome, Hashimoto's disease, disease, diabetes mellitus, Graves conditions, contact sensitivity disease, diabetes mellitus, Graves conditis contact sensitivity disease, diabetes mellitus, Graves conditions, contact sensitivity disease, diabetes mellitus, Graves disease, diabetes mellitus, Graves conditions, contact sensitivity disease, diabetes mellitus, Graves conditions, contact sensitivity disease, diabetes mellitus, Graves disease, and conditions, contact sensitivity. The polypeptides of the invention have conditions and physical properties which are analogous to conditions and properties which are analogous to conditions.
                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAY82571 to AAY82577 represent specifically claimed copolymer molecular CC weight TV-marker polypeptides from the present invention. The present convertion describes polypeptides (1) for determining the molecular polypeptides (2) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight convertion acrid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for CC glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune CC diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune cophoritis, autoimmune thyproiditis, autoimmune CC ureoretinitis, Crohn's disease, chronic immune thrombocytopaenia contact sensitivity disease, diabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, diabetes mellitus, or systemic or systemic or systemic or systemic or systemic contacts acraying necroisis neonbidius validatis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune opphoritis, osteoarthritis, autoimmune enveoretinitis, Crohn's disease, chronic immune thrombocytopaenia purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated include host-versus-graft disease, graft-versus-bost disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  diabetes mellitus; Graves disease; Guillain-Barre's syndrome; psoriasis;
Hashimoto's disease; idiopathic myxoedema; myasthenia gravis;
pemphigus vulgaris; systemic lupus erythematosus.

                                                                                                          S
                                                                                                                                                                                                                                                                                cc weight Tv-marker polypeptides from the present invention. The present convention describes polypeptides (I) for determining the molecular cc weight of a copolymer (CP), which has an identified molecular weight CC and an amino acid composition corresponding to the copolymer. The CC glatiramer acetate related tetrapolymers. The polypeptides may also be CC glatiramer acetate related tetrapolymers. The polypeptides may also be CC glatiramer acetate and preventing immune diseases in a mammal. Autoimmune CC diseases which may be treated include either cell-mediated or creating diseases and inflammatory conditions, e.g. multiple computations, autoimmune opphoritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune opphoritis, autoimmune thyroiditis, autoimmune CC uncertinitis, Crohn's disease, chronic immune thromocytopaenia CC myxoedema, mysathenia gravis, psoriasis, pemphigus vulgaris, or systemic CC include host-versus-graft disease, graft-versus-host disease, and celisued reythematosus. Mediated-mediated diseases which can be treated CC include host-versus-graft disease, graft-versus-host disease, and celisued molecular weights and physical properties which are analogous to CC glatiramer acetate molecules, which makes them ideal for use as

CC MAY82571 to AAY82577 represent specifically claimed copolymer molecular CC weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the molecular CC invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The CC polypeptides of the invention are used as molecular weight markers for CC glatiramer acetate related testrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune CC diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, CC demyelinating diseases and inflammatory conditions, e.g. multiple CC sclements, autoimmune cophoritis, osteoarthritis, autoimmune haemolytic canaemia, autoimmune cophoritis, osteoarthritis, autoimmune haemolytic CC canaemia, autoimmune cophoritis, osteoarthritis, autoimmune cophoritis, contact sensitivity disease, diabetes mellitus, Graves CC purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves CC purpura, colitianes contact sensitivity diseases, didopathic condition myzoedema, myzathenia gravis, psoriasis, pemphigus vulgaris, or systemic condition heat versue-craft disease and diseases which can be treated conditions and disease and di
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antianaemic; immunosuppressive; demyelinating disease; osteoarthritts; inflammatory condition; multiple sclerosis; rheumatoid arthritis; crohn's disease; chronic immune thrombocytopaenia purpura; colitis; diabetes mellitus; Graves disease; Guillain-Barre's syndrome; psoriasis; Hashimoto's disease; idiopathic myxoedema; myasthenia gravis; pemphigus vulgaris; systemic lupus erythematosus.
                                                                            include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous glatiramer acetate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Copolymer; molecular weight marker; TV-marker; immune disease; glatiframer acetate; autoimmune disease; antiarthritic; neuroprotective; osteopathic; immunosuppressive; antithyroid; antiinflammatory; antidiabetic; thyromimetic; haemostatic; antipsoriatic; dermatological;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δ
                                                        CC weight TV-marker polypeptides from the present invention. The present convertion describes polypeptides (1) for determining the molecular convertion describes polypeptides (1) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight convertion acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for conjugation acid composition corresponding to the copolymer. The copolymeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune colleases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, colleases, theumatoid arthritis, obteoarthritis, autoimmune haemolytic canaemia, autoimmune cophoritis, autoimmune thryroiditis, autoimmune cophoritis, autoimmune thryroiditis, autoimmune cophoritis, autoimmune thryroiditis, autoimmune cophoritis, autoimmune thryroiditis, crothaves disease, chronic immune thropocytopaenia confisease, collitis, contact sensitivity disease, diabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic conficulate acide to the confist sand physical properties which can be treated confined molecular weights and physical properties which are analogous to defined molecular weights and physical properties which are analogous to conficular weight and properties which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    glatiramer acetate; autoimmune disease; antiarthritic; neuroprotective; osteopathic; immunosuppressive; antithyroid; antiinflammatory; antidiabetic; thromametic; haemostatic; antipsoriatic; dermatological; antianaemic; immunosuppressive; demyelinating disease; osteoarthritis; inflammatory condition; multiple sclerosis; rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Crohn's disease; chronic immune thrombocytopaenia purpura; colitis; diabetes mellitus; Graves disease; Guillain-Barre's syndrome; psoriasis; Hashimoto's disease; idiopathic myxoedema; myasthenia gravis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        06-APR-2000

The resulting plasmids encode fusion proteins consisting of beta-glucuronidase, Protein A, and rCOP-1 sequences. A methionine residue occurs between the Protein A and rCOP-1 sequence, originating from the 5' linker sequence, in order that the COP-1 polypeptide may be cleaved from the fusion protein. rCOP-1: polypeptide may be cleaved from the fusion protein. rCOP-1: polypeptide may be cleaved from the fusion protein. rCOP-1: polypeptide may be cleaved from the fusion protein. rCOP-1: polypeptide may be cleaved from the fusion protein. rCOP-1: polypeptide may be cleaved from the fusion protein. rCOP-1: polypeptide may be cleaved from the fusion protein. rCOP-1: polypeptide may be cleaved from the fusion protein. rCOP-1: polypeptide may be cleaved from the fusion protein. rCOP-1: polypeptide may be cleaved from the fusion protein. rCOP-1: polypeptide may be cleaved from the fusion protein.
